

DS100 - Individual Cork Inspection

At Cork Supply, we offer a unique promise, a proven method for individually inspecting every single cork for off aromas and TCA. We call it the DS100 individual dry soak inspection process. Our customers call it an insurance policy that protects their investment.

DS100 is a non-invasive, non-destructive dry soak process in which our elite team of certified technicians tests each and every individual cork, no matter how large or small the order.

DS100 is the only process that assures winemakers that every single cork has been inspected for off aromas and TCA, offering a proven track record of success and giving our customers the confidence of knowing their corks won't interfere with the taste or integrity of their wine.

Key Features and Benefits

- Individual inspection of every cork for off-aromas, including TCA
- All corks undergo industry-best TCA-testing requirements
- Winemakers are encouraged to take part in the testing
